Decentralized Energy and Climate Change – a Solution for Denmark and the World

Reduce your carbon footprint by staying off the road to Copenhagen and participating in this low carbon COP-15 virtual side event

Organized by: The World Alliance for Decentralized Energy (WADE) and COGEN Europe

Event Description:

Denmark and the Netherlands are among the world's leaders in deployment of clean and efficient decentralized energy technology. Asia is home to the world's fastest expanding economies. Find out how Denmark and the Netherlands transformed their economy and environment through decentralized energy and how these technologies can work globally in developed and developing countries.

As countries around the world look for ways to mitigate and adapt to climate change, convert production processes and facilities from fossil fuel based to more diverse forms of energy, reduce emissions and boost economic growth, the Dutch and Danish stories show what is possible through investments in decentralized energy.

Qualified attendees will receive login credentials by Dec. 11th.
